DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed January 16, 2007, with respect to independent claims 1, 9, and 15 have been fully considered and are persuasive (see Response to Rejections under 35 U.S.C. § 102, page 16 and Response to Rejections under 35 U.S.C. § 103, paragraph bridging pages 19 and 20). The rejection of claims 1-20 has been withdrawn.

Allowable Subject Matter

2. The following is the examiner's statement of reasons for allowance: The prior art of record fails to clearly teach or suggest a system for compensating for skew in a programmable clock synchronizer for effectuating data transfer between a first circuitry with a first clock domain and a second circuitry with a second clock domain, wherein said first and second clock signals having a clock cycle ratio of $N/M \geq 1$ and, wherein the system comprises a skew state detector in communication with a phase detector for tracking a phase relationship between said first clock signal and said second clock signal relative to a zero point of a timing window corresponding to said second clock signal.
